

Allina Buffalo Clinic

RJM Construction was selected by MedCraft and Allina Health to build a single-story medical office building in Buffalo.

The primary care clinic consists of standard patient rooms, as well as lab and x-ray rooms. The Allina clinic will provide a healing environment to serve the primary care needs of all Wright county residents.

Crews faced difficult site conditions at the project onset and partnered with the civil engineer and excavator to make corrections. Exterior features include a combination of brick and stucco with a glass curtain wall and metal panels accenting the entrance.
