

Allina Health River Falls Clinic

MSP Commercial selected RJM to build a medical office building in River Falls.

Occupied by Allina Health, the single-story building has 17 exam rooms focusing on family medicine, womens health and holistic care practices. The clinic features a community room that will be used for health and wellness classes.

The medical office building was completed in seven months with a majority of the work being completed during the winter months. This project included building a skyway to the Allina River Falls Hospital, allowing patients and staff to access both buildings safely.
