

## Eden Prairie Aquatic Center Renovation

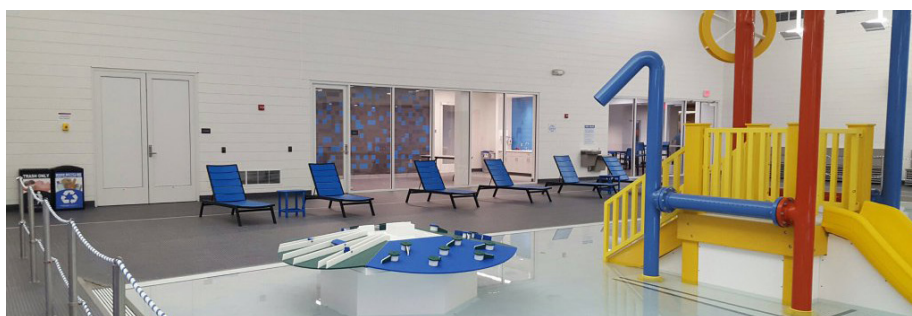

The City of Eden Prairie selected RJM Construction to oversee upgrades to the aquatic center within the city's community center.

The project included a 46,690-SF addition and subsequent renovation of the existing upper level fitness area.

RJM completed this project in two phases. The first phase included two new competition lap pools, diving well, spectator seating, and adjacent locker rooms. The existing pools remained occupied during the first phase.

The second phases consisted of demolishing the existing pool and structure. The result of this demolition was a new warm water leisure pool, spa, and waterslide system.

The fitness area was also completed within the second phase.
