

Methodist Hospital Clinical Simulation Center

LOCATION	Minneapolis, MN
MARKET SECTOR	Healthcare
SQUARE FEET	1,700 sq. ft.
PROJECT TYPE	Hospital
ARCHITECT	BWBR Architects

RJM Construction built a Clinical Simulation Center at Methodist Hospital.

The simulation center provides real-life training scenarios for hospital staff and community members. The RJM team collaborated with project partners to find the most cost effective solutions to imitate a true environment.

The Center consists of two patient rooms and two command centers that allow operators to help respond and record data and videos for learning. The patient rooms have clinical equipment with the same certifications and units, providing the perfect learning and training environment. Interactive mannequins with real behaviors and responses to treatments and actions provide data for analysis.
