

UMMCH Wilf Family Center

LOCATION	Minneapolis, MN
MARKET SECTOR	Healthcare
SQUARE FEET	8,675
PROJECT TYPE	Other - Auditorium, Conference Center
ARCHITECT	HGA Architects

Hired by U of M Health, RJM Construction built the Wilf Family Center within the University of Minnesota Masonic Children's Hospital.

A key component of the project was relocating a water line that served five fully occupied patient floors. In collaboration with the project team and hospital staff, RJM developed a highly detailed disruption avoidance plan. The plan included overnight work, temporary water stations and a thorough communication plan.

The state-of-the-art remodel includes a 200+ seat auditorium, two conference rooms, and a telehealth room. Advanced technology allows for communication between patients and medical staff, as well as the ability to transmit data from one site to another. The center will host renowned researchers, innovators and professionals in the health care industry.
