

Bhatti GI Ambulatory Surgery Center

Bhatti GI is expanding services to patients by hiring RJM Construction to construct a new 80,000sf medical office building in Edina.

RJM Construction is working alongside Pope Design group to construct a new four-story building after the demolition of an existing building.

Demolition of an existing building will take place before the construction of the new four-story building. The bottom two levels will be parking to eliminate a surface parking lot due to square footage constraints. The upper two levels will house the Bhatti GI clinic and ambulatory surgery center.

If required, the new building will have the structural capacity to expand another three levels in the future.
